

BMI CAN HELP KEEP YOUR FACILITIES SAFE.

HVAC systems are critical in maintaining indoor air quality, promoting safe and clean indoor environments, and reducing health risks in your facility.

To address concerns over COVID-19, BMI is now offering:

NEEDLEPOINT BIPOLAR IONIZATION (NPBI)

from Global Plasma Solutions, Inc.

HERE'S HOW IT WORKS:

NPBI modules are installed inside your existing HVAC units, and use cold plasma technology to create oxygen ions that are released into your air supply. These ions safely and effectively kill pathogens (mold, bacteria, viruses) and attach to airborne particles to make them easier for your HVAC system to filter. This NPBI technology cleans and sanitizes indoor air, providing a safe and healthy environment for your staff and customers. For detailed technical information, visit www.GlobalPlasmaSolutions.com.

KILL PATHOGENS

NEUTRALIZE ODORS

REDUCE PARTICLES

SAVE ENERGY
